

The Township of Neptune Sewerage Authority has been experiencing some odor complaints and sincerely apologize for any inconvenience. The Authority has identified potential sources of those complaints and we are doing our best to rectify the condition. While the Authority owns and operates an 8.5 mgd wastewater treatment plant, we are committed to protecting the environment, with providing our customers professional, safe and efficient wastewater treatment on a 24/7 basis. With the help of our Engineer, Remington & Vernick, TNSA has purchased two odor control units for the WWTP that will help capture any odors emanating from the processes within the plant. They are currently on order and will be delivered and installed in the fall of 2021. In addition, TNSA has identified a user who will be adding an odor control chemical into their pump station to help mitigate odors coming into the WWTP within the next two weeks.
